

Downlands Water Supply

Information Guide

Version: 2
Date: July 2023

Overview

The Downlands Water Supply is a trickle-feed rural water scheme operated and maintained by the Timaru District Council. Most areas of the Downlands scheme have been closed to new connections since the late-1990s. Following recent infrastructure upgrades, we now have more water available and are re-opening the Downlands scheme.

This form contains guidance on how to submit a Downlands services consent application form to either apply for more water or request a new connection. It summarises the eligibility criteria, key terms and relevant fees.

Note: If you have previously filled out an expression of interest form, you still need to now complete a formal application.

Before you apply

Before you start your application, you will need your:

- Property Valuation Number
- Existing water allocation (if a current Downlands customer)
- Existing or proposed tank size

Your valuation number and existing water allocation can be found on your rates invoice.

Please fill in every field on the application form to avoid delays in processing your application.

Hydraulic assessment

All applications will be hydraulically assessed by Council to ensure water can be supplied. There are parts of the Downlands Water Supply that will require further upgrades before water can be supplied. If water cannot be hydraulically supplied at this time, the application will be declined and no fees will be payable.

Eligibility criteria

The following property types may be eligible for a new connection or additional water where the water will be used for stock and/or domestic water use only, and where properties are within or directly on the boundary of the current Downlands scheme:

- Existing properties with no current connection to the scheme
- New properties created from an approved subdivision
- Additional dwellings (either existing or under construction)
- Properties that are currently under-supplied based on our updated design allocation.

At this time we are not intending to make connections available to properties in Albury township, or at Pareora Huts. Extraordinary water is not available e.g. for irrigation.

The daily allocation for a property is based on 65 litres per hectare for stock, with an additional 1000 litres per dwelling.

For example, a 15-hectare property with one dwelling would be eligible for:

15 hectares @ 65 litres per hectare = 975 litres
One dwelling @ 1,000 per dwelling = 1,000 litres
Total allocation eligible for = 1,975 litres*
**This would be rounded up to 2,000 litres (i.e. 2 units of water per day)*

Use this table to calculate the amount of water that your property is eligible for:

| | | | |
|---|--------------------|---|-------------|
| Area in ha | @ 65 l/ha | = | |
| No. of dwellings | @ 1,000 l/dwelling | = | |
| Total litres | | | |
| <i>A unit is the equivalent of 1,000 per day</i> | | | |
| <i>Minimum of 1.0 unit per day</i> | | | |
| <i>½ units available up until 3 units per day</i> | | | Total units |

Alternatively, an online calculator to calculate the correct allocation for your property can be found on Council's website: www.timaru.govt.nz/downlands-reopening

Fees

- An application fee is payable once your application is approved.
- Subdivisions will require a separate application (and application fee) for each lot.
- Please carefully review the Fees table below as we are unable to refund the application fee if your application is approved and you choose not to proceed at a later date.
- All connections or increased allocations must meet our storage requirements as outlined in the Downlands Water Supply Policy. This may mean that you need to purchase a tank or upgrade the size of your existing tank.

Summary of Fees (including GST)

| Charges associated with Approval | New Connection | Additional Water (into existing tank) |
|---|--|--|
| Timaru District Council Application Fee | \$550.00 | \$550.00 |
| Downlands Water Supply - New Connection | \$6,500.00 per connection | N/A |
| Downlands Water Supply - New Unit | \$8,000.00 per unit | \$8,000.00 per unit |
| Rejet Fee | N/A | \$125.92 per rejet |
| Pipeworks | Varies – please obtain a quote from an infrastructure approved contractor | N/A |

Infrastructure Approved Contractors

All costs of new services (including disconnections and/or relocations, if applicable) are the responsibility of the landowner or their agent. Council does not carry out any physical works or arrange contractors to carry out work except rejet works associated with additional water allocations going into an existing tank.

Once the Services Consent is granted, the applicant is required to arrange their own contractor from the list of Infrastructure Approved Contractors for that work type. All work on Council infrastructure (including excavation/reinstatement of the roading network) must be carried out by an Infrastructure Approved Contractor. www.timaru.govt.nz/approvedcontractor

Timeframes

Our target is for applications to take less than 20 working days to process after acceptance for lodgement. However, we cannot guarantee this. Some complex applications may take longer.

Terms and conditions

- A Services Consent provides authorisations that are different to Resource Consent or Building Consent matters. **Approval of a Resource Consent or Building Consent does not imply approval of a Services Consent and vice versa.**
- Services Consents for Downlands water, once approved, are valid for a period of 24 months.
- Conditions of the Services Consent will specify requirements.
- Further information can be found in the Downlands Water Supply Policy: www.timaru.govt.nz/downlands-policy

Illegal connections / prosecution

Connections made to the Council water networks without a Services Consent is a Bylaw Offence. Any connections made to Council infrastructure without a Services Consent will be assessed for enforcement action.

Help/support

On our website, we have an application form, eligibility and cost calculator, and some frequently asked questions. For more information refer: www.timaru.govt.nz/downlands-reopening

Works requiring additional approvals

Additional approvals may be required in the following circumstances:

- A Land Entry agreement is required when connecting to a Downlands pipeline which is situated on land not owned by yourself.
- When work requires disturbance of a natural waterway or creek bed, this work will require approval from the Regional Council (ECAN) and may require Resource Consents in addition to Council's Services Consent. It is the landowner's responsibility to obtain any Resource Consent prior to commencing work.
- A Corridor Access Request (CAR) is required for **all** work undertaken within the road corridor. This is required to be obtained through the Before-U-Dig website www.beforeudig.co.nz by the appropriate Council Infrastructure Approved Contractor, with an approved Work Access Permit (WAP) granted by the appropriate Road Controlling Authority prior to commencing works. Further information relating to working in the road corridor can be found at www.timaru.govt.nz/work-in-road
